

---

D.M. Wills has been retained by the Ministry of Transportation to undertake the detailed design of storm sewer replacement and pavement rehabilitation on Highway 11 within the Town of Temagami. Part of this assignment is to document the existing environmental (fish and fish habitat, terrestrial ecosystems) conditions and assess any impacts of the proposed works. We will be undertaking fieldwork in the vicinity of the storm sewer outlets on July 30 (weather depending) to gather information on the existing conditions. As we know the area around the docks can be quite busy in the summer months, we are providing this notice so that you are aware that our team will be onsite.

The work that will be undertaken includes electrofishing in the lake in the locations indicated in red in the attached PDF. There will be four people involved in the fieldwork and no heavy equipment or vehicles will be required. Disruption is anticipated to be minimal.

If you have any questions or concerns, please feel free to reach out.

Thanks,

**Sarah Roberts, P.Eng.** · Senior Project Engineer
