October 2 2024

Barry Turcotte
Public Works Superintendent
Town of Temagami

On behalf of the Ontario clean Water Agency, I am writing to express our full support for the completion of the desludging at the Temagami South Lagoon with Bishop Water Inc.

Bishop's Geo tube design has changed the way we think about desludging in many facets of wastewater sludge, septage and silt. This technologies through Bishop, allows the user to tailor their work within a budgeted amount.

While using Bishop's MECP approved ECA for the project, the Municipality can trial the technology without an ECA amendment. The Bishop's ECA stipulates the notification to MECP prior to the work as well as a close out report of the Desludging for both MECP and the Municipality.

We have recommended Bishops Geo Tube design for desludging using their ECA throughout OCWA with success both financially and with desired results.

Sincerely

Victor Legault
Senior Capital Manager
